DETAILED ACTION

Claim Objections

1. Claims 2, 5, and 6 are objected to because of the following informalities:
on line 2 of claim 2, substitute "the" with --a--,
on line 3 of claim 5, delete the second occurrence of "the", and
on line 1 of claim 6, substitute "a" with --the--.
Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 2 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Walker et al. (US 6,240,396) (hereinafter referred to as 'Walker').

Walker teaches a system featuring a central controller 200 having a venue table 520 storing data associated with a venue and a customer table 530 storing data associated with customers registered with the system (col. 4, lines 54-67). Record 595 of a transaction table 580 describes the details of a transaction including the customer's name and corresponding venue and seat(s) (col. 16, lines 1-15).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 3, 4, 6, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walker in view of Berson (US 5,598,477). The teachings of Walker have been discussed above.

Walker lacks the teaching of associating the customer with the seat by creating a digital signature which is in turn capable of generating a two dimensional bar code.

Berson teaches a ticket 22 having a field 22BC including information T which corresponds to at least a part of digitally signed conventional ticket information printed in a field 22T. Field 22BC is printed as a two dimensional bar code (col. 3, line 51-col. 4, line 5).

Art Unit: 2876

One of ordinary skill in the art would have readily recognized that providing customer and corresponding seat information in the form of a digital signature would have been beneficial for the security of the information. The digital signature would have made it possible for only particular individuals or entities to gain access to the information, thereby reducing the possibility of access and usage of the information for fraudulent purposes. Therefore, it would have been obvious, at the time the invention was made, to modify the teachings of Walker with the digital signature as taught by Berson.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kay (US 6,223,166) teaches cryptographic encoded ticket issuing and collection system for remote purchasers.

Morita et al. (JP 2001236459 A) teach a ticket information management device.
